

Specification Quality Checklist: Google Ads Integration

Purpose: Validate specification completeness and quality before proceeding to planning

Created: 2026-08-01

Feature: [spec.md](#)

Content Quality

- ☒ No implementation details (languages, frameworks, APIs)
- ☒ Focused on user value and business needs
- ☒ Written for non-technical stakeholders
- ☒ All mandatory sections completed

Requirement Completeness

- ☒ No [NEEDS CLARIFICATION] markers remain
- ☒ Requirements are testable and unambiguous
- ☒ Success criteria are measurable
- ☒ Success criteria are technology-agnostic (no implementation details)
- ☒ All acceptance scenarios are defined
- ☒ Edge cases are identified
- ☒ Scope is clearly bounded
- ☒ Dependencies and assumptions identified

Feature Readiness

- ☒ All functional requirements have clear acceptance criteria
- ☒ User scenarios cover primary flows
- ☒ Feature meets measurable outcomes defined in Success Criteria
- ☒ No implementation details leak into specification

Notes

- All checklist items passed on initial validation and remain passing after clarification session (16/16 → 16/16).
- Spec assumes an AdSense account will be obtained; blank-slot behaviour on unapproved accounts is documented as an assumption.
- 4 user stories covering P1 (ad gate), P2 (ambient display + admin config), and P3 (artist transparency).
- **3 clarifications applied (2026-08-01):** Hybrid Auto+manual ad model, 30s default gate (admin-configurable), AdSense Experiments out of scope.
- 12 functional requirements (FR-001–FR-012), 3 key entities, 6 measurable success criteria.
- Feature is ready for [/speckit-plan](#).
